

# PYTHON- POWERED EXCEL

# OBJECTIVES FOR TODAY

---

- Load, view and write workbooks to and from Python
- Add custom formats, protections, data, and metadata to workbooks from Python
- Identify common Python packages for data analysis, visualization, and Excel automation
- Navigate and execute code in Jupyter notebooks

# FOLLOWING ALONG

---

- Each section is a sub-folder
- Demos = follow along with me
- Drills = try it yourself
  - Refresh your memory with the demo notes

# 1. UP AND RUNNING WITH PYTHON IN EXCEL

# SORRY THE THE SLOW WIND-UP..

“Perspective is worth 80 IQ points.”

-- Alan Kay

# PYTHON IS:

- A programming language
- Open source

# PYTHON IS NOT:

- Commercially supported
- A spreadsheet or database

# THE DATA ANALYTICS STACK

# **PYTHON & EXCEL: “YES, AND” DATA ANALYSIS**

# IT'S HAPPENING

## How can we improve Excel for Windows (Desktop Application)?

### Python as an Excel scripting language

Let us do scripting with Python! Yay! Not only as an alternative to VBA, but also as an alternative to field functions (=SUM(A1:A2))

**Daniel** shared this idea · November 04, 2015 · [Flag idea as inappropriate...](#)

ACCEPTING VOTES · **Excel Team [MSFT]** (Product Owner, Office.com) responded · March 11, 2021

Thank you for the continued interest in this space. While we don't have specific plans to announce at this time, we have been researching the topic, conducting customer interviews, and are working with the Python team at Microsoft so we can build a plan that we think can address the scenarios you told us about and ensure it can run wherever Excel runs.

# PYTHON: THERE'S A PACKAGE FOR THAT!

There's a  
**PACKAGE**  
for that!

STRINGFEST   
ANALYTICS

Two steps:

1. Install the package (*already done for you*)

```
pip install packagename
```

```
conda install packagename
```

2. Open the package

```
import packagename as pn
```

# PYTHON: THERE'S A PACKAGE FOR THAT!

There's a  
**PACKAGE**  
for that!

STRINGFEST   
ANALYTICS

Our stack for today:

Data analysis:

- pandas

Write Excel workbooks:

- `xlsxwriter`

Data visualization

- matplotlib
- seaborn

# PYTHON <> EXCEL – THE POSSIBILITIES!

Package	Pro	Cons
<code>xlsxwriter</code>	Write almost anything to Excel from Python	Writes to Excel only
<code>xlwings</code>	Feature-rich: write data/UDFs, call VBA, robust debugging tools	Local downloads needed
<code>Openpyxl</code>	Read and write Excel files	Limited file editing
<code>pyxlsb</code>	Read and write <i>.xlsb</i> files	Limited features
<code>Xlrd, xlwt, xlutils</code>	Can work with <i>.xls</i> files	Limited features

# QUESTIONS?

# SEE YOU ON JUPYTER

Start: `1-up-and-running/up-and-running.ipynb`

- Read data into Python from Excel
  - Analyze data using pandas
- Write results to Excel (limited formatting)

**HOUSE RULES ON**  
**JUPYTER:**  
**DON'T PANIC**

# QUESTIONS?

# 4. CONCLUSION

# FUTURE LEARNING

# Future learning

- Explore the [xlsxwriter documentation](#) (617 pages!)
- Creating and manipulating Python data structures: lists, dictionaries
- pandas for data analysis
- xlwings applications

# Download a local Anaconda distribution of Python
